Data Analyst with 6 months of internship experience in data processing, reporting, and business insights. Skilled in Excel, SQL, and Power BI, with experience in data cleaning, dashboard creation, and supporting decision-making. Open to paid internship/Jobs opportunities in Delhi NCR (remote/in-person).

TECHNICAL SKILLS

Programming: Python, SQL
Visualization: Power BI, Matplotlib
Databases: MySQL
Analytics: EDA, Data Cleaning, Data Transformation
Tools: Excel, Git, GitHub, VS Code
Concepts: KPI Analysis, Dashboard Design, Data Storytelling

EXPERIENCE

Data Analytics Industrial Internship

01/2026 – 06/2026

Eagletfly Solutions Pvt Ltd.

New Delhi

- Analyzed and cleaned **10,000+** records using Excel, SQL, and Python.
- Built **5+** Power BI dashboards to track KPIs and business performance.
- Wrote **30+** SQL queries for data extraction, analysis, and reporting.
- Automated recurring reports, reducing manual effort by approximately **30%**.
- Performed data validation and quality checks to ensure reporting accuracy.
- Collaborated with team members to deliver data-driven business insights.

PROJECTS

Customer Churn Analysis Dashboard | Power BI, SQL, Excel 🔗

• Analyzed customer behavior and churn patterns using business KPIs including churn rate, contract type, tenure, and monthly charges. • Designed a one-page interactive Power BI dashboard with KPI cards, trend analysis, and customer segmentation visuals. • Performed data cleaning, transformation, and exploratory analysis to uncover retention opportunities and business insights. • Delivered actionable recommendations to improve customer retention and reduce churn risk.

IBM HR Analytics Dashboard | Power BI, Excel 🔗

• Built a multi-page HR analytics dashboard to monitor employee attrition, workforce demographics, job satisfaction, and performance trends. • Developed KPI-driven visualizations enabling analysis across departments, age groups, education fields, and job roles. • Applied data modeling and dashboard design principles to transform HR data into actionable insights. • Enhanced workforce reporting through interactive filtering and drill-down analysis.

SQL Sales Analysis Project | MySQL 🔗

• Performed business-focused sales analysis using SQL queries, joins, aggregations, and data transformation techniques. • Identified purchasing trends and customer behavior patterns through structured analysis of transactional datasets. • Generated data-driven insights that supported marketing and customer retention strategies.
